

ASCENT CAPTURE 5

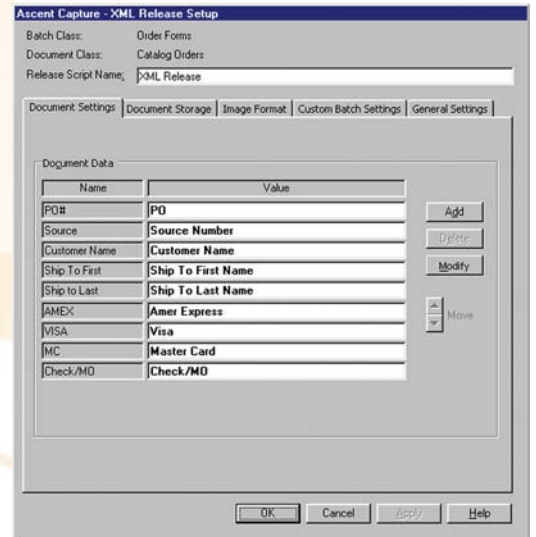

XML RELEASE v5.0

PRODUCT INTEGRATION

Ascent Capture® provides an out-of-the-box capture solution for any content management repository that supports Extensible Markup Language (XML). The Ascent Capture XML Release provides users with access to a comprehensive production capture solution, including document, data and Internet-based distributed capture via a universal release script.

DOCUMENT SETTINGS TAB

The Document Settings tab allows the user to define document index fields. The user may add, edit, and delete name/value fields as desired. Ascent Values can be used to associate values for the index fields.

EASY RELEASE SETUP

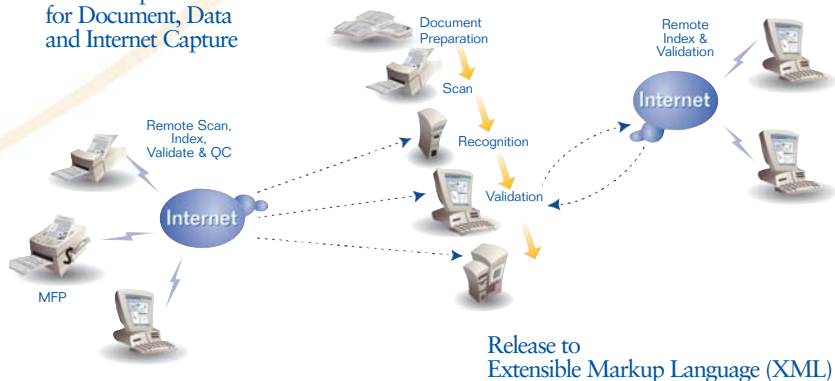

The Ascent Capture release module consists of five simple tabs to allow quick configuration of release features. The administrator creates document index fields, specifies the storage location for images, OCR, and XML/DTD files, selects desired image formats, creates desired XML elements and attributes, and links Ascent Values to the index fields, XML element values, and XML attributes. Once the release script is set up and the batch classes are published, the user can begin capturing and releasing batches.

UNATTENDED RELEASE

The Ascent Capture release module runs unattended on a Windows workstation and can be configured for automated release scheduling during off hours to avoid impacting the network.

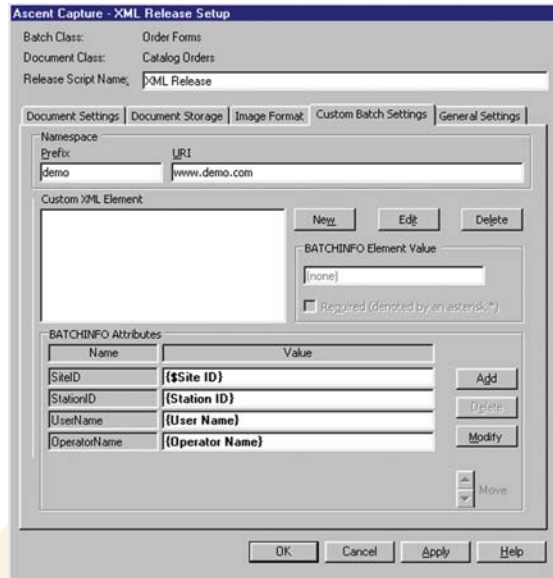

Ascent Capture Process for Document, Data and Internet Capture

PRIMARY FEATURES

- Universal release script for any content repository system that supports XML
- Automatic XML and DTD file generation at release
- Customizable index fields, XML elements, and XML attributes
- Ability to link Ascent Values to index fields, XML element values, and XML attributes
- Easy setup, viewing, and retrieval of data
- Multiple document release formats including eDocuments, OCR, PDF, and a variety of image types
- Multiple release support

CUSTOM BATCH SETTINGS TAB

The Custom Batch Settings tab allows the user to create custom XML elements and attributes. The user may add, edit, and delete elements and attributes as desired. Ascent Values can be used to associate values for each XML element value.
